Kenneth S. Hanson

Compliance Engineer

July 10 2017
**FCC Information**

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

Product Modification Warning

High End Systems products are designed and manufactured to meet the requirements of United States and International safety regulations. Modifications to the product could affect safety and render the product non-compliant to relevant safety standards.

Mise En Garde Contre La Modification Du Produit
Les produits High End Systems sont conçus et fabriqués conformément aux exigences des règlements internationaux de sécurité. Toute modification du produit peut entraîner sa non conformité aux normes de sécurité en vigueur.

Produktmodifikationswarnung

Avvertenza Sulla Modifica Del Prodotto
I prodotti di High End Systems sono stati progettati e fabbricati per soddisfare i requisiti delle normative di sicurezza statunitensi ed internazionali. Qualsiasi modifica al prodotto potrebbe pregiudicare la sicurezza e rendere il prodotto non conforme agli standard di sicurezza pertinenti.

Advertencia De Modificación Del Producto
Los productos de High End Systems están diseñados y fabricados para cumplir los requisitos de las reglamentaciones de seguridad de los Estados Unidos e internacionales. Las modificaciones al producto podrían afectar la seguridad y dejar al producto fuera de conformidad con las normas de seguridad relevantes.
Important Safety Information

Instructions pertaining to continued protection against fire, electric shock, and injury to persons are found throughout this manual. Please read all instructions prior to assembling, mounting, and operating this equipment.

The following international caution and warning symbols appear in margins throughout this manual to highlight messages.

This symbol appears adjacent to Caution messages. Not heeding these messages could result in personal injury and/or damage to equipment.

This symbol appears adjacent to high voltage warning messages. Not heeding these messages could result in serious personal injury.

This symbol cautions against mounting the fixture on or near a flammable surface.

This symbol indicates that, while operating, equipment surfaces may reach very high temperatures. Allow the fixture to cool before handling.

Features

- Modular Construction, Fast Service Design
- Electronic Cooling System Control, Active Thermal Control
- Fan Modes- Normal / Continuous / Studio
- LED Type- 440W Bright White Engine
  - LED Hours- 70% Luminous output, 50,000 hrs.
- Control Options- DMX 512 / RDM / Art-Net
  - DMX Channels- 32
  - 5-Pin DMX/RDM Connector
  - Art-Net Connector
  - “PowerCON TRUE1” Connector
- Pan and tilt movement: 8 and 16 bit resolution, for smooth and precise motion
  - Movement: Pan: 540°
  - Movement: Tilt: 265°
  - Max Speed Pan- 360 (seconds)- 2.27
  - Max Speed Tilt- 180 (seconds)- 1.25
- Motorized focus
  - Motorized Zoom : Wash Mode- ~10-50
  - Motorized Zoom : Zoom Mode- ~5-45
- Strobe/shutter: High speed shutter, 0-13 Hz or random strobe
- Dimmer intensity from 0%-~100%
- Step-less Iris, 5-100% linear change iris, pulse iris effect
- Control board with full color LCD graphic display and touch-keyboard
- Internal battery for display and config. Enables users to enter menu for setting start address and other functions.
- Display: Can be changed 180° reverse to fit for different installation position.
- 7 Position color wheel, plus open white. Two directional rainbow effects
- CMY & CTO Variable Color Mixing for Infinite Color Possibilities
- Rotating gobo: 6 interchangeable, rotating gobos plus open
- Frost effect
- Position memory, auto correction after unexpected movement
- Software-upload by optional accessory dongle via DMX line
- Pan and Tilt Locks
- Road Case Included (Single)
TECHNICAL SPECIFICATIONS
- Power supply: AC 100-240V~, 50/60Hz
- Power consumption: 600W
- Net weight: 30 KGS
Safety Considerations

**CAUTION:** The information in this chapter is intended to assist qualified personnel only.

**WARNING:** Disconnect power before servicing. Replace fuses with the specified type and rating only.

This device has left the factory in perfect condition. In order to maintain this condition and to ensure a safe operation, it is absolutely necessary for the user to follow the safety instructions and warning notes written in this user manual.

*Important:*

*Damages caused by the disregard of this user manual are not subject to warranty. The dealer will not accept liability for any resulting defects or problems.*

**Warnings**

- If the fixture has been exposed to temperature changes due to environmental changes, do not switch it on immediately. The condensation that could form could cause internal damage. Leave the fixture switched off until it has reached room temperature.
- This fixture falls under protection-Class I. Therefore it is essential that the device be earthed.
- The electrical connection must carry out by a qualified person.
- Make sure that the available voltage is within stated range.
- Make sure the power cord is never crimped or damaged by a sharp edge. Replace cable immediately if damaged, this work must be done by an authorized dealer.
- Always disconnect from power, when the device is not in use or before cleaning it. Only handle the power cord by the plug. Never pull out the plug by tugging the power cord.
- Don’t project the beam onto combustible substances, this could cause a safety hazard and/or start a fire.
- Please be aware that damages caused by modifications to the fixture will void warranty.
- Keep away from children and non-professionals.
- Maintenance should be performed by a qualified individual.
- There are no serviceable parts inside the device. The following points have to be considered when inspecting the fixture for maintenance:
- All screws for installing the devices or parts of the device have to be tightly connected and must not be corroded.
- Mechanically moved parts must not show any traces of wear and must not rotate freely without unbalance.
- The electric power supply cables must not show any damage, material fatigue or excessive dirt.
General Guidelines

- This device is a lighting effect for professional use on stages, theaters, or other professional installations, etc., the device was designed for indoor use only.
- This fixture is only allowed to be operated with the max alternating current (AC Voltage) which stated in the technical specifications printed on the fixture.
- Lighting effects are not designed for permanent operation. Operation breaks ensure that the device will perform longer without failure.
- Do not shake the device. Avoid brute force when installing or operating the device.
- While choosing the installation-spot, please make sure that the device is not exposed to extreme heat, moisture or dust. Please don’t project the beam onto combustible substances. The minimum distance between light-output from the projector and the illuminated surface must be more than 0.5 meter or 1.6 ft.
- If you use the quick-lock cam to hang this fixture, be sure to properly insert the fasteners in the quick lock holes correctly. Do not hang this fixture without a safety cable.
- Operate the device only after having familiarized with its functions. Do not permit operation by unqualified persons, damages can occur due to unprofessional operation.
- Please use the original packaging if the device is to be transported.
- For safety reasons, please be aware that all modifications on the device are forbidden.
- If this device will be operated in any way different to the one described in this manual, the product may suffer damages and the warranty becomes void. Furthermore, misuse may lead to short-circuit, burns, electric shock, lamp explosion, crash, and other damage to the fixture or persons.
Installation Instructions

- The installation must always be secured with a secondary safety attachment, e.g. an appropriate safety cable.
- Never stand directly below the device when mounting, removing or servicing the fixture.
- The operator has to make sure the safety and technical installations are approved by an expert before taking using this fixture in the field for the first time.
- Fixed installations must be inspected by a skilled person on a regular basis.
- Overhead mounting requires extensive experience, including amongst others calculating working load limits, installation material being used, and periodic safety inspection of all installation material and the device. If you lack these qualifications, do not attempt the installation yourself. Improper installation can result in serious bodily injury.

Attachment Instructions.

- Attach the Omega clamp on the bracket by tightening the M12 bolt on the bracket to the hole in the middle of the bracket.
- Insert the quick-lock fasteners of the bracket into the respective holes on the bottom of the fixture.
- Tighten the quick-lock fasteners fully clockwise.
- Install the second Omega clamp.
- Attach the safety-cable through the holes on the bottom of the base. Attach to the trussing system or other safe fixation point.
- Be sure the safety is fully looped, the quick-link is attached and fully tighten
- Inspect for complete attachment before lifting over-head
Dimensional Drawings

Dims listed are mm and (inches)

**Dimensional Drawings:**

- 460 mm (16.1 in)
- 500 mm (19.7 in)
- 574 mm (22.6 in)
- 444 mm (17.5 in)
- 425 mm (16.7 in)
- 260 mm (10.2 in)
- 324 mm (12.8 in)
- 720 mm (28.6 in)
- 118 mm (4.6 in)
- 261 mm (10.3 in)
Mounting Orientations

Be sure this fixture is kept at least 0.5m (1.6ft) away from any flammable materials (decoration etc.). Always use and install the supplied safety cable as a safety measure to prevent accidental damage and/or injury in the event the clamp is improperly installed or fails.

Overhead mounting requires extensive experience, including amongst others calculating working load limits, a detailed knowledge of the installation materials being used, and periodic safety inspection. This safety inspection must cover all installation material, trussing, hardware and the fixture. If you lack these qualifications, do not attempt the installation yourself. Improper installation can result in severe injury and possible death if struck by a falling fixture.
Linking Fixtures

The SolaHyBeam 1000 fixture operates on standard DMX512 link controlled by a DMX console. The number of fixtures on a link will be determined by the combined number of channels required by all the fixtures. A SolaHyBeam 1000 fixture requires a 32 channel footprint on a standard DMX512 link. Attach the fixture to the link using data-grade cable and 5-pin or 3-pin XLR cable connectors.

Cable Connectors

The SolaHyBeam 1000 fixture accepts both 3-pin and 5-pin XLR cable connectors. Cabling must have a male XLR connector on one end of the cable and a female XLR connector on the other end.

*Note:* Pins four and five of a 5-pin cable connector are not used, but they allow a secondary data link to pass through the fixture.

19
Connecting to the Link

To link one or more fixtures to a DMX controller:

- Connect the male XLR connector of a DMX Data cable to the controller’s DMX Data Out connector.
- Connect the Data cable’s female XLR connector to the Data In connector of the first (or next) fixture on the DMX link.
- Continue linking the remaining fixtures connecting a cable from the Data Out connector of each fixture to the Data In connector of the next fixture on the link.

DMX Termination

For installations where the DMX cable has to run a long distance or is in an electrically noisy environment, a DMX terminator on the last fixture of the link prevents data reflection, which can corrupt the data communication on the link.

Terminate the link by installing a 120 ohm, 1/4 watt (minimum) terminator in the fixture’s Data Out (female) cable connector in the last fixture on each DMX link.

To construct a terminator:

1. Disassemble a male 3-pin or 5-pin XLR connector.
2. Solder a 120 ohm resistor, minimum of 1/4 watt, between Pin 2 and Pin 3.
3. Reassemble the XLR connector.
DMX Start Address

All fixtures should be given a unique DMX starting address when using a DMX signal, so that the correct fixture responds to the correct control signals. This DMX start address is the channel number from which the fixture starts to “listen” to the digital control information sent out from the DMX controller. The setting of this start address is achieved by setting the correct number on the display located on the base of the device.

You can set the same starting address for all fixtures or a group of fixtures, or make use different addresses for each fixture individually.

If you set the same address, all the units will start to “listen” to the same control signal from the same channel number. In other words, changing the settings of one channel will affect all the fixtures simultaneously.

If you set a different address, each unit will start to “listen” to the channel number you have set, based on the quantity of control channels of the unit. That means changing the settings of one channel will affect only the selected fixture.

In the case of this fixture, which is a 32 channel fixture, you should set the starting address of the first unit to 1, the second unit to 33 (32+1), the third to 65 (33+32), and so on.
## Fixture Control Board

The Control Board offers several features: you can simply set the starting address, run the pre-programmed program or make other changes.

The main menu is accessed by pressing the [Mode / ESC] button until the display is visible.

Browse through the menu by pressing the [UP] button, [Down] button, [Left] button or [Right] button.

Press the [Enter] button in order to select the desired menu.

You can change the selection by pressing the directional buttons, i.e. the [UP] button, [Down] button, [Left] button or [Right] button.

Confirm every selection by pressing the [Enter].

You can leave every mode by pressing the [Mode / Esc] button.

The functions provided are described in the following sections. The menu item will disappear after 10 seconds after the last key press. The functions provided are described in the following sections.

Control Board Functions

Address
With this function, you can adjust the desired DMX start address via the Control Board.
1. Access the main menu.
2. Tap the <Up/Down> button until “Address” is displayed.
3. Press ENTER, the display will show “Address.”
4. Tap the <Up/Down> button, the display will show “A001~AXXX”
5. Press ENTER to confirm or press <MODE/ESC> to return to the main menu

Time Info
Current Time
With this function, you can display the running time from last power on. The display shows “XXXX”, “XXXX” stands for the number of hours. The counter is reset after power-off.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until “Info” is displayed. Press ENTER, the display will show “Info.”.
   - Tap the <Up/Down> button until the display will show “Time Info.”.
   - Press ENTER, the display will show “Time Info.”.
2. Press <Up/Down>, the display will show “Current Time”.
3. Press <ENTER>, the display will show “Current Time”.
4. The display will show “XXXX” (Hours);
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Total Run Time
With this function, you can display the total running time of the fixture. The display shows “XXXX”, “XXXX” stands for the number of hours.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until “Info” is displayed. Press ENTER, the display will show “Info.”.
   - Tap the <Up/Down> button until the display will show “Time Info.”.
   - Press ENTER, the display will show “Time Info.”.
2. Press <Up/Down>, the display will show “Ttl Life Hrs”.
3. Press <ENTER>, the display will show “Ttl Life Hrs”.
4. The display will show “XXXX” (Hours);
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Last Run Time
With this function, you can display the last running time of the fixture. The display shows “XXXX”, “XXXX” stands for the number of hours.
1. Tap <MODE/ESC> button, access the main menu.
- Tap the <Up/Down> button until "Info" is displayed. Press ENTER, the display will show "Info."
- Tap the <Up/Down> button until the display will show "Time Info."
- Press ENTER, the display will show "Time Info."

2. Press <Up/Down>, the display will show "Last Run Hrs".
3. Press <ENTER>, the display will show "Last Run Hrs".
4. The display will show "XXXX" (Hours) :
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

LED Hrs
With this function, you can display total running time of the LED. The display shows "XXXX", "XXXX" stands for the number of hours.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until "Info" is displayed. Press ENTER, the display will show "Info."
   - Tap the <Up/Down> button until the display will show "Time Info."
   - Press ENTER, the display will show "Time Info."
2. Press <Up/Down>, the display will show "LED Hours".
3. Press <ENTER>, the display will show "LED Hours".
4. The display will show "XXXX" (Hours) :
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Timer PIN
With this function, you can display the timer password. The time password is 038.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until "Info" is displayed. Press ENTER, the display will show "Info."
   - Tap the <Up/Down> button until the display will show "Time Info."
   - Press ENTER, the display will show "Time Info."
2. Press <Up/Down>, the display will show "Timer PIN".
3. Press <ENTER>, the display will show "Timer PIN", the time password is 038.
4. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Clr Last Run
With this function, you can clear last run time of the fixture. The display shows "OFF" or "ON", Press "Enter" to confirm.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until "Info" is displayed. Press ENTER, the display will show "Info."
   - Tap the <Up/Down> button until the display will show "Time Info."
   - Press ENTER, the display will show "Time Info."
2. Press <Up/Down>, the display will show "Clr Last Run".
3. At "Timer Password" menu input a correct password, press<ENTER>, the display will show "Clr Last Run",
4. The display will show "OFF" or "ON".
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Timer PIN
With this function, you can display the timer password. The time password is 038.

1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until "Info" is displayed. Press ENTER, the display will show "Info.".
   - Tap the <Up/Down> button until the display will show "Time Info."
   - Press ENTER, the display will show "Time Info."
2. Press <Up/Down>, the display will show "LED Time PIN".
3. Press <ENTER>, the display will show "LED Time PIN", the time password is 038.
4. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Clean LED Time
With this function, you can clear the running time of the LED engine (this should not be done unless an engine has been replaced)

1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until "Info" is displayed. Press ENTER, the display will show "Info.".
   - Tap the <Up/Down> button until the display will show "Time Info."
   - Press ENTER, the display will show "Time Info."
2. Press <Up/Down>, the display will show "Clean LED Time".
3. At "Timer Password" prompt, input a correct password, press <ENTER>, the display will show "Clean LED Time",
4. The display will show "Off" or "On"
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Value Displayed
NONE
With this function, you can choose to turn off display of DMX Control channel values.

1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until "Info" is displayed.
   - Press ENTER, the display will show "Info".
2. Press <Up/Down>, the display will show "Value Disp".
3. Press <ENTER>, the display will show "Value Disp".
4. The display show "None".
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

ALL, PAN
With this function you can display the DMX 512 value of each channel. If all is selected, the display will automatically show a channel that is changing.

1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until "Info" is displayed.
   - Press ENTER, the display will show "Info".
2. Tap the <Up/Down> button until "Value Disp" is displayed.
3. Press ENTER, the display will show "Value Disp".
4. Tap the <Up/Down> button, choose each channel.
5. Press ENTER to confirm or press <MODE/ESC> to return to the main menu.
Head Temp.
With this function you can display the temperature on the display board of the base (near CMY-filter) in Celsius.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down>button until “Info” is displayed.
   - Press ENTER, the display will show “Info”.
2. Press <Up/Down>, the display will show “Head Temp.”.
3. Press< ENTER>, the display will show “Head Temp.”.
4. The display show “XXX “C/ “F”.
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Fan Speed
With this function you can display the RPM of various fans inside the fixture.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down>button until “Info” is displayed.
   - Press ENTER, the display will show “Info”.
2. Press <Up/Down>, the display will show “Fan Speed.”.
3. Press< ENTER>, the display will show “Fan 1: xxx RPM”, Fan 2: xxx RPM” ....”
4. Press<ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Ethernet IP
With this function, you can display the IP address of the fixture.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down>button until “Info” is displayed.
   - Press ENTER, the display will show “Info”.
2. Press <Up/Down>, the display will show “Ethernet IP”.
3. Press< ENTER>, the display will show “Ethernet IP”.
4. The display show “Ethernet IP xxx.xxx.xxx.xxx”.
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Software Ver
With this function, you can display the software version of the device.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down>button until “Info” is displayed.
   - Press ENTER, the display will show “Info”.
2. Press <Up/Down>, the display will show “Software Ver”.
3. Press< ENTER>, the display will show “Software Ver”.
4. The display show “Ver x.x”.
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.
Set
Status
No DMX Mode
With this function, when DMX is not connected, it runs automatic, closed, hold and music. The default is hold.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until “Set” is displayed.
   - Press ENTER, the display will show “Set”.
   - Tap the <Up/Down> button until the display will show “Status”.
   - Press ENTER, the display will show “Status”.
2. Press <Up/Down>, the display will show “No DMX Mode”.
3. Press <ENTER>, the display will show “No DMX Mode”.
4. The display show “Hold”, then press <Up/Down>, the display will show “Close”, “Auto”, “Music”.
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Pan Reverse
With this function you can reverse the Pan-movement.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until “Set” is displayed.
   - Press ENTER, the display will show “Set”.
   - Tap the <Up/Down> button until the display will show “Status”.
   - Press ENTER, the display will show “Status”.
2. Press <Up/Down>, the display will show “Pan Reverse”.
3. Press <ENTER>, the display will show “Pan Reverse”.
4. The display show “OFF”, then press <Up/Down>, the display will show “ON”.
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Tilt Reverse
With this function you can reverse the Tilt-movement.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until “Set” is displayed.
   - Press ENTER, the display will show “Set”.
   - Tap the <Up/Down> button until the display will show “Status”.
   - Press ENTER, the display will show “Status”.
2. Press <Up/Down>, the display will show “Tilt Reverse”.
3. Press <ENTER>, the display will show “Tilt Reverse”.
4. The display show “OFF”, then press <Up/Down>, the display will show “ON”.
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Encoders
With this function, you can change the feedback of the pan movement or tilt movement.
1. Tap <MODE/ESC> button, access the main menu.
- Tap the <Up/Down> button until “Set” is displayed.
- Press ENTER, the display will show “Set”.
- Tap the <Up/Down> button until the display will show “Status”.
- Press ENTER, the display will show “Status”.

2. Press <Up/Down>, the display will show “Encoders”.
3. Press <ENTER>, the display will show “Encoders”.
4. The display show “ON”, then press <Up/Down>, the display will show “OFF”.
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Pan/Tilt Spd
With this function, you can select modes from 1 to 4.
1. Tap <MODE/ESC> button, access the main menu.
- Tap the <Up/Down> button until “Set” is displayed.
- Press ENTER, the display will show “Set”.
- Tap the <Up/Down> button until the display will show “Status”.
- Press ENTER, the display will show “Status”.
2. Press <Up/Down>, the display will show “Pan/Tilt Spd”.
3. Press <ENTER>, the display will show “Pan/Tilt Spd”.
4. The display show “Speed 1”, then press <Up/Down>, the display will show “Speed 2”, “Speed 3”, “Speed 4”.
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Hibernation —— Standby mode
The lamp and step motors will be power off if the fixture stay without DMX signal for 15 mins (Factory default). The fixture will Home once it receive DMX signal again.
1. Tap <MODE/ESC> button, access the main menu.
- Tap the <Up/Down> button until “Set” is displayed.
- Press ENTER, the display will show “Set”.
- Tap the <Up/Down> button until the display will show “Status”.
- Press ENTER, the display will show “Status”.
2. Press <Up/Down>, the display will show “Hibernation”.
3. Press <ENTER>, the display will show “Hibernation”.
4. The display show “15M”, then press <Up/Down>, the display will show “01M”, “02M”, .. “99M” or “OFF”.
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Defogger
With this function, you can select ON / OFF, or OnPwr.
1. Tap <MODE/ESC> button, access the main menu.
- Tap the <Up/Down> button until “Set” is displayed.
- Press ENTER, the display will show “Set”.
- Tap the <Up/Down> button until the display will show “Defogger”.
- Press ENTER, the display will show “Defogger”.
2. Press <Up/Down>, the display will show “Defog ON”.

30
3. Press <ENTER>, the display will show "Pan/Tilt Spd".
4. The display show "Speed 1", then press <Up/Down>, the display will show "Speed 2", "Speed 3", "Speed 4".
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Select Input
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until "Set" is displayed.
   - Press ENTER, the display will show "Set".
2. Press <Up/Down>, the display will show "Select Input".
3. Press <ENTER>, the display will show "Select Input".
4. The display show "DMX Only", then press <Up/Down>, the display will show "Art-Net On IP02", "Art-Net On IP10".
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Set Universe
1. Tap <MODE/ESC> button, access the main menu, then tap the <Up/Down> button until "Set" is displayed. Press ENTER, the display will show "Set".
2. Press <Up/Down>, the display will show "Set Universe".
3. Press <ENTER>, the display will show "Set Universe".
4. The display show "000~255".
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Service PIN

Service PIN — The Password for this function is "50".

RDM PID — To take advantage of the technical capabilities of the RDM system, each fixture must have a unique RDM PID, this unique identifying number is used by the controller to manage an individual fixture. There cannot be duplicate RDM PID on the same DMX cable run, this will result in a data collision, and the controller may or may not notify of this issue. Ensure that all fixtures have a unique RDM PID if RDM functionality is to be used.

If DMX splitters are used and RDM control is to be used, these splitters must support RDM. The number and type of RDM parameters depend on the RDM controller being used.

To Set the RDM PID
Navigate to: Set -> Service Settings -> Service PIN Press <UP> button to select 050 and press <ENTER>.
Navigate to RDM PID: Press the <UP> button to select unique ID’s for each fixture and press <ENTER>.

Disp.Setting

Shutoff Time

With this function you can shut off the color LCD display after 2 to 60 minutes. Turn the encoder in order to select the desired shutoff time. The default is 2 minute.
Flip Display
With this function you can rotate the display by 180°.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until “Set” is displayed.
   - Press ENTER, the display will show “Set”.
2. Tap the <Up/Down> button until the display will show “Disp.Setting”.
3. Press ENTER, the display will show “Disp.Setting”.
4. Press <Up/Down>, the display will show “Flip Display”.
5. Press <ENTER>, the display will show “Flip Display”.
6. The display show “OFF”, then press <Up/Down>, the display will show “ON”.
7. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Key Lock
With this function you can activate the automatic keylock status. If this function is activated, the keys will be locked automatically after exiting the edit mode for 15 seconds. Keeping press the <MODE/ESC> key for 3 seconds if you do not need this function.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until “Set” is displayed.
   - Press ENTER, the display will show “Set”.
2. Press <Up/Down>, the display will show “Key Lock”.
3. Press <ENTER>, the display will show “Key Lock”.
4. The display show “ON”, then press <Up/Down>, the display will show “OFF”.
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Temp. C/F
With this function, Display the temperature for Celsius or Fahrenheit.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until “Set” is displayed.
   - Press ENTER, the display will show “Set”.
2. Press <Up/Down>, the display will show “Temp. C/F”.
3. Press <ENTER>, the display will show “Temp. C/F”.
4. The display show “Celsius”, then press <Up/Down>, the display will show “Fahrenheit”.
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Reset Default
With this function, you can reset all settings to factory default.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until “Set” is displayed.
   - Press ENTER, the display will show “Set”.
2. Press <Up/Down>, the display will show “ResetDefault”.
3. Press <ENTER>, the display will show “ResetDefault”.
4. The display show “OFF”, then press <Up/Down>, the display will show “ON”. (ON = Restore to Factory Default)
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Test
Home
With this function you can reset the fixture, and reset the Control Boards. You can select the different reset functions by choosing different items in the menu.
1. Tap <MODE/ESC> button, access the main menu.
   a. Tap the <Up/Down> button until “Test” is displayed.
   b. Press ENTER, the display will show “Test”.
2. Tap the <Up/Down> button until the display will show “Home”. Press ENTER, the display will show “Home”.
3. The display show “All”, Press <Up/Down>, the display will show “Pan&Tilt”, “Colors”, “Shutter”, “Others”.
4. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Test Channel
With this function you can test each channel on its (correct) function.
1. Tap <MODE/ESC> button, access the main menu.
   a. Tap the <Up/Down> button until “Test” is displayed.
   b. Press ENTER, the display will show “Test”.
2. Press <Up/Down>, the display will show “Test Channel”.
3. Press <ENTER>, the display will show “Test Channel”.
4. The display will show “Pan Moving” first channel, Press <Up/Down>, to choose another channel.
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Manual Ctrl.
With this function, you can adjust the fixture more easily. All effects will be canceled, the shutter opens and the dimmer intensity will be set to 100%. With the individual functions, you can focus the light on a flat surface (wall) and perform various fixture adjustments.
1. Tap <MODE/ESC> button, access the main menu.
   a. Tap the <Up/Down> button until “Test” is displayed.
   b. Press ENTER, the display will show “Test”.
2. Press <Up/Down>, the display will show “Manual Ctrl.”.
3. Press <ENTER>, the display will show “Manual Ctrl.”.
4. The display show “PAN=XXX”.
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Calibration
With this function, you can calibrate and adjust the effect wheels to their correct positions. The password is 050.
1. Tap <MODE/ESC> button, access the main menu.
   a. Tap the <Up/Down> button until “Test” is displayed.
   b. Press ENTER, the display will show “Test”.
2. Press <Up/Down>, the display will show “Calibration”.
3. Press <ENTER>, the display will show “Calibration”.

33
4. The display show “Password=XXXX”.
5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

Preset
In this menu, user can select different channels list by different sequence:
For example, after the user enter this manual, if select Auto Program = CH 22, means in this User’s mode, the “Dimmer” is in Channel 16.

Playback
DMX Control
To set the fixture to be controlled via DMX.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until “Preset” is displayed. Press ENTER, the display will show “Preset”.
   - Tap the <Up/Down> button until the display will show “Playback”.
   - Press ENTER, the display will show “Playback”.
2. Tap the <Up/Down> button until “DMX Control” is displayed.
3. Press ENTER, the display will show “DMX Control”.
4. Tap the <Up/Down> button, choose each channel.
5. Press ENTER to confirm or press <MODE/ESC> to return to the main menu.

Set To Slave
With this function, you can define the device as slave.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until “Preset” is displayed. Press ENTER, the display will show “Preset”.
   - Tap the <Up/Down> button until the display will show “Playback”.
   - Press ENTER, the display will show “Playback”.
2. Tap the <Up/Down> button until “Set To Slave” is displayed.
3. Press ENTER, the display will show “Set To Slave”.
4. Tap the <Up/Down> button, the display will show “Slave1”, “Slave2”, “Slave3”.
5. Press ENTER to confirm or press <MODE/ESC> to return to the main menu.

Auto Program
With this function, you can run the internal program. You can select the desired program under “Select program”. You can set the number of steps under “Edit program”. You can edit the individual scenes under “Edit scenes”. With this function, you can run the individual scenes manually or automatically, with the adjusted Step-Time.
1. Tap <MODE/ESC> button, access the main menu.
   - Tap the <Up/Down> button until “Preset” is displayed. Press ENTER, the display will show “Preset”.
   - Tap the <Up/Down> button until the display will show “Playback”. Press ENTER, the display will show “Playback”.
2. Tap the <Up/Down> button until “Auto Program” is displayed.
3. Press ENTER, the display will show “Auto Program”.
4. Tap the <Up/Down> button, the display will show “Master1”, “Alone”.
5. Press ENTER to confirm or press <MODE/ESC> to return to the main menu.
**Music Ctrl.**

With this function, you can run the internal program sound-controlled.

1. Tap <MODE/ESC> button, access the main menu, then tap the <Up/Down> button until “Preset” is displayed. Press ENTER, the display will show “Preset”. Tap the <Up/Down> button until the display will show “PlayBack”. Press ENTER, the display will show “PlayBack”.

2. Tap the <Up/Down> button until “Music Ctrl.” is displayed.

3. Press <ENTER>, the display will show “Music Ctrl.”.

4. Tap the <Up/Down> button, the display will show “Master”, “Alone”.

5. Press <ENTER> to confirm or press <MODE/ESC> to return to the main menu.

**Select Prog.**

With this function, you can select the program for the Program Run.

**Edit Prog.**

With this function, you can edit the internal programs.

**Edit Scenes**

With this function, you can edit the scenes of the internal programs.

**Rec. Controller**

This fixture features an integrated DMX-recorder by which you can transmit the programmed scenes from your DMX-controller to the fixture. Adjust the desired scene numbers via the encoder (from – to). When you call up the scenes at your controller, they will automatically be transmitted to the moving head.

**Example:**

A Master unit can send up to 3 different data groups to the Slave units, i.e. a Master unit can start 3 different Slave units, which run 3 different programs. The Master unit sends the 3 program parts in a continuous loop.

To start an Auto Program:

1. **Slave-Setting:**
   - Select “Function Mode” by navigating with the arrow key.
   - Press the Enter button to confirm.
   - Select “Set to slave” by navigating with the arrow key.
   - Press the Enter button to confirm.
   - Select “Slave 1”, “Slave 2” or “Slave 3”.
   - Press the Enter button to confirm.
   - Press the MODE/ESC button in order to return to the main menu.
2. Automatic Program Run

- Select “Function Mode” by navigating with the arrow key.
- Press the Enter button to confirm.
- Select “Auto Program” by navigating with the arrow key.
- Press the Enter button to confirm.
- Select “Master” or “Alone”. The selection “Alone” means Stand Alone-mode and “Master” that the device is defined as master.
- Press the Enter button to confirm.
- Press the MODE/ESC button in order to return to the main menu.

3. Program selection for Auto Pro Part

- Select “Edit program” by navigating with the arrow key.
- Press the Enter button to confirm.
- Select “Select programs” by navigating with the arrow key.
- Press the Enter button to confirm.
- Select “Auto Pro Part 1”, “Auto Pro Part 2” or “Auto Pro Part 3”, and then select which Slave program is to be sent. Selection “Part 1” means, that the Slave unit runs the same program as the master units.
- Press the Enter button to confirm.
- Press the MODE/ESC button in order to return to the main menu.

4. Program selection for Edit Program

- Select “Edit program” by navigating with the arrow key.
- Press the Enter button to confirm.
- Select “Edit program” by navigating with the arrow key.
- Press the Enter button to confirm.
- Select the desired program. With this function you can edit specific scenes into a specific program.
- Press the Enter button to confirm.
- Press the MODE/ESC button in order to return to the main menu.

5. Automatic Scene Recording

- Select “Edit program” by navigating with the arrow key.
- Press the Enter button to confirm.
- Select “Edit scenes” by navigating with the arrow key.
- Select the desired scene numbers. You can program a maximum number of 250
- Press the Enter button to confirm.
- Press the MODE/ESC button in order to return to the main menu.

Example:
Program 2 includes scenes: 10, 11, 12, 13
Program 4 includes scenes: 8, 9, 10
Program 6 includes scenes: 12, 13, 14, 15
Auto Pro Part 1 is Program 2;
Auto Pro Part 2 is Program 4;
Auto Pro Part 3 is Program 6

The 3 Slave groups run the Auto Program in certain time segments, as shown in the following picture:

**Part 1:**

```
Scene 10  Scene 11  Scene 12  Scene 13
```

**Part 2:**

```
Scene 8  Scene 9  Scene 10  Scene 8
```

**Part 3:**

```
Scene 12  Scene 13  Scene 14  Scene 15
```
Preset Programming and Playback

SolaHyBeam 1000 fixtures can be programmed through the on board menu system using Preset Programming. This section describes how to program your fixtures for stand-alone operation using the on-board memory in each fixture to create and store scenes.

Preset Programming Overview

Presets are built from combining scenes into programs and then assigning the programs to Program Partitions for playback by a fixture designated as the Master and, if desired, groups of slave fixtures assigned to a Program Partition. SolaHyBeam 1000 fixtures ship with factory programmed scenes and programs ready for you to use or edit.

Creating presets consists of performing the following steps:

- Designating a fixture as the Master
- Selecting/Editing Scenes
- Sequencing Scenes into Programs
- Sequencing Programs into Program Partitions
- Configuring slave fixtures on the link to playback a Program Partition from the master

Navigating to the Preset Menu

To enter the Preset Menu:

- Press the [MODE/ESC] button to enter the first level of the menu system. The display will show Address and Info as the first two options in the top menu level.
  - The red star [*] indicates the current menu.
- Using the [UP],[DOWN] buttons, scroll to Preset.
- Press the [Enter] button to select.

Master and Slave

The following example shows the relationship between scenes, programs and partitions programmed on the Master and how slave groups are assigned.

- Groups of scenes are edited into Programs 1–6 on the fixture designated as Master
- Program 2 is assigned to Part 1
- Program 4 is assigned to Part 2
- Program 6 is assigned to Part 3
- Fixtures assigned as Slave 1 playback Part 1
- Fixtures assigned as Slave 2 playback Part 2
- Fixtures assigned as Slave 3 playback Part 3
- Scene 4 Scene 5 Scene 6 Scene 7
Preset programming requires one fixture to act as the Master. All other SolaHyBeam 1000 fixtures on the link can then be set as slaves to playback the Master presets. Slave fixtures receive all their preset parameter and timing information from the master fixture. Playback settings designate a fixture as a master or a slave and also allow you to revert from Auto Programming to DMX control from console or set a fixture in Master or standalone mode for audio control.

Automatic Program Run
This Playback option lets you designate a fixture to playback in Standalone mode or as a Master. **Alone** is the default setting.

To designate a fixture as a Master:
- Navigate to and select the Preset menu.
- Use the [UP],[DOWN] buttons to scroll to Playback menu and press [Enter] to select.

- Use the [UP],[DOWN] buttons to scroll to Auto Program menu and press [Enter] to select.
- Use the [UP],[DOWN] buttons to scroll to Master and press [Enter] to select. Your choice will be shown in the display.

**Set to Slave**

After a preset program is defined on a Master fixture, other SolaHyBeam 1000 fixtures on the same DMX link can be designated laves to playback Program Part 1, 2 or 3 as defined on the Master fixture.

To designate a fixture as a Slave:
- Navigate to and select the Preset menu.
- Use the [UP],[DOWN] buttons to scroll to Playback menu and press [Enter] to select.
- Use the [UP],[DOWN] buttons to scroll to Set To Slave menu and press [Enter] to select.
- Use the [UP],[DOWN] buttons to scroll to Slave1, Slave2, or Slave3 option and press [Enter] to select.
- Your choice will be shown in the display.

**DMX Control**

Selecting this option reverts the function from Auto Program (Preset Programming) to DMX Receive (console control). Selecting this option will take you back to the menu startup screen where DMX Receive will be displayed as the currently selected function.

**Music Control**

This Playback option lets you designate a fixture to playback scenes based on audio triggers detected by the internal microphone in stand alone or as a Master. Alone is the default setting.

**Edit Scenes**

A parameter is a fixture attribute that can be controlled to modify the light beam in terms of color, beam quality and pattern, intensity, or focus (position). DMX programming assigns a DMX value to each of the fixture’s parameters. A scene is one combination of parameter settings.

SolaHyBeam 1000 fixtures provide 250 pre-programmed scenes you can use or edit to build a preset program. The first 64 scenes are factory created settings which can be edited as desired.

**Edit Scene Parameters**

The Edit Scenes option lets you select a DMX value for any of the 39 parameters in the SolaHyBeam 1000 DMX protocol.

**To edit the DMX parameters in a scene:**
- Navigate to and select the Preset menu as shown on page 35.
- Use the [UP],[DOWN] buttons to scroll to the Edit Scenes option and press [Enter] to select.
- Use the [UP],[DOWN] buttons to scroll to the Scene number you wish to build on from 1-250 and press to [Enter] select.
- Use the [UP],[DOWN] buttons to scroll to the parameter you wish to edit (Pan, Tilt, MSpeed, Color Wheel, etc.) and press to [Enter] select.

Use the [UP],[DOWN] buttons to scroll to a new DMX value for the parameter you have selected and press [Enter] to select. This takes you back to parameter options. Continue through all parameters until your desired look is complete.
- When you are finished selecting all parameter values for a particular Scene, press the [MODE/ESC] button to return to the Preset level menu.
**Edit Scene Time**

This Scene Edit option lets you set the scene time in seconds from 00.2s–99.9s. The default value is 00.3s. This value determines how long the scene will play before the next scene is triggered.

**Set Fade Time**

This Scene Edit option lets you set a fade time value from 000–255. This value determines the crossfade time applied to parameters once the scene is triggered.

**Set Input by Out**

This Scene Edit option allows you to capture the parameter values for a scene from DMX input into the fixture. Once you create a look from a DMX console do the following:

- Navigate to and select the Preset menu as shown on page 35.
- Use the [UP],[DOWN] buttons to scroll to the Edit Scenes option and press [Enter] to select.
- Use the [UP],[DOWN] buttons to scroll to the Scene number you wish to build on from 1-250 and press [Enter] to select.
- Use the [UP],[DOWN] button to scroll to the Input by Out and [Enter] to press to select.
- The scene will record the current parameter values being input via DMX.
- When you are finished capturing DMX into a scene, press [Enter] to return to the main menu.

**Edit Program**

This preset menu option lets you select from 10 factory set programs to edit. You can set up to 64 Scenes in a sequence of Steps for each program. You can also test the program at any time by selecting Program Test to playback the program as it is currently defined.

To edit a program:

- Navigate to and select the Preset menu.
- Use the [UP],[DOWN] buttons to scroll to Edit Prog. menu and press [Enter] to select.
- Use the [UP],[DOWN] buttons to scroll to a program from Program 1–Program 10 and press [Enter] to select.
- Use the [UP],[DOWN] buttons to scroll to the Step in the program you want to edit from Step 1 to Step 64 and press [Enter] to select. The display will show which scene is currently assigned to that step.
- Use the [UP],[DOWN] buttons to scroll to the scroll to the scene you want to assign to the step and press [Enter] to select.
- When you have assigned all the steps you want, select End and press [Enter] to save the program.

**Select Program**

This preset option lets you assign a Preset Program to one of three Program Partitions. A fixture assigned as a Slave can playback any Program Partition defined by the Master fixture.

**Note: The Master fixture can only playback Program Partition 1**

To assign a program to each Program Partition:

- Navigate to and select the Preset menu as shown on page 35.
- Use the [UP],[DOWN] buttons to scroll to Select Prog menu and press [Enter] to select. Each Program Part. has 10 preset programs.
- Use the [UP],[DOWN] buttons to scroll to Prog. Part 1 and press [Enter] to select.
- Use the [UP],[DOWN] buttons to scroll to a program from Program 1–Program 10 and press [Enter] to select the program you want to include in the Program Part.
- Use the [UP],[DOWN] buttons to scroll to Prog. Part 2 and press [Enter] to select.
- Use the [UP],[DOWN] buttons to scroll to a program from Program 1–Program 10 and press [Enter] to select the program you want to include in the Program Part.
- Use the [UP],[DOWN] buttons to scroll to Prog. Part 3 and press [Enter] to select.
- Use the [UP],[DOWN] buttons to scroll to a program from Program 1–Program 10 and press [Enter] to select the program you want to include in the Program Part.
- Press the [Mode / ESC] button to return to the main menu.

Scenes Input

This function allows you to capture multiple scenes from DMX values input to the fixture. You first define the number of scenes to capture and then each time a DMX value changes, a different scene will be captured.

1. Navigate to and select the Preset menu.
2. Use the buttons to scroll to the Scenes Input option and press to select.
3. Use the buttons to set the starting scene number.
4. Use the buttons to set the ending scene number. With each change of any DMX value, the capturing scene will advance to the next one in the range.
5. When all scenes have been recorded, the scenes input menu will automatically exit.

Note: During Scenes Input recording, the SolaHyBeam 1000 does not playback the DMX input, it only captures it. You must edit or playback the scenes after recording to see the results. It is best to prepare the scenes on a DMX controller with a zero crossfade for all parameters between each step. Remember any change of a DMX value will advance to the next scene to capture.
DMX Control Protocol

The most current DMX Control Protocol data for the SolaHyBeam 1000 can be found on the High End Systems, Inc. website https://www.highend.com/SolaHyBeam1000-DMXProtocol

The following data is current as of protocol version 1.3, revision date July 13, 2017.

Protocol Notes

1. Continuous mode should take the quickest path from 255-0, and 0-255.
   - Continuous mode color wheel aperture centers
     | Color   | Center of color DMX value |
     |---------|---------------------------|
     | Open    | 0                         |
     | Red     | 32                        |
     | Blue    | 64                        |
     | Green   | 96                        |
     | Yellow  | 128                       |
     | Orange  | 160                       |
     | Magenta | 192                       |
     | Dark Blue | 224                     |

2. 63 Discrete multi step macros to be defined later. These will require macro speed and x fade channels. The macros will operate independently. The Xfade and speed channels act as multipliers of the programmed speed in the discrete macro steps.
   - Speed / X fade channel operation
     - 0 stops playback or crossfade
     - 1-127 decreases playback speed / crossfade time (*<1)
     - 128 playback or cross fade speed is as programmed (*1)
     - 129-255 increases playback speed / crossfade time (*>1)

3. Fan Control Mode settings are not retained after a power cycle. Please resend fan control modes after power cycle.
Error Codes

When you turn on the fixture, it will complete a start-up procedure. The display may show “Err channel is XX” if there are problems with one or more channels. “XX” stands for channel 1, 2, 3, 4, 5, 6 - testing positioning sensors. For example, when the display shows “Err channel is Color wheel”, it means there is an error in channel 13. If there are errors on channel 1, channel 3, channel 7 at the same time, you may see the error message “Err channel is Pan movement”, “Err channel is Tilt movement”, “Err channel is Dimmer” flash repeated for 2 times, and then the fixture will generate a second reset. If the fixture error message is retained after performing reset more than 2 times, only the channels which have errors will not work properly, others can work. Please contact support if detailed assistance is needed.

PAN- Er
(PAN-yoke movement error) This message will appear after the reset of the fixture if the yoke’s magnetic-indexing circuit malfunction (sensor failed or magnet missing) or the stepping-motor is defective (or its driving IC on the main PCB). The PAN- movement is not located in the default position after the reset.

TILT- Er
(TILT-head movement error) This message will appear after the reset of the fixture if the head’s magnetic-indexing circuit malfunctions (sensor failed or magnet missing) or the stepping-motor is defective (or its driving IC on the main PCB). The TILT- movement is not located in the default position after the reset.

Color Wheel Er
(Color wheel- error) This message will appear after the reset of the fixture if the magnetic-indexing circuit malfunction (sensor failed or magnet missing) or the stepping-motor is defective (or its driving IC on the main PCB). The color wheel is not located in the default position after the reset.

Gobo Wheel 1 Er
(Gobo Wheel 1- error) This message will appear after the reset of the fixture if the magnetic-indexing circuit malfunction (sensor failed or magnet missing) or the stepping-motor is defective (or its driving IC on the main PCB). The Gobo Wheel 1 is not located in the default position after the reset.

Gobo Rot. 1 Er
(Gobo Rot. 1- error) This message will appear after the reset of the fixture if the magnetic-indexing circuit malfunction (sensor failed or magnet missing) or the stepping-motor is defective (or its driving IC on the main PCB). The Gobo Rot. 1 is not located in the default position after the reset.
Focus Er

(Focus - error) This message will appear after the reset of the fixture if the magnetic-indexing circuit malfunction (sensor failed or magnet missing) or the stepping-motor is defective (or its driving IC on the main PCB). The Focus is not located in the default position after the reset.

Zoom Er

(Zoom –wheel error) This message will appear after the reset of the fixture if the head’s magnetic-indexing circuit malfunctions (sensor failed or magnet missing) or the stepping-motor is defective (or its driving IC on the main PCB). The Zoom - wheel is not located in the default position after the reset.

FROST Er

(FROST -whee error) This message will appear after the reset of the fixture if the head’s magnetic-indexing circuit malfunctions (sensor failed or magnet missing) or the stepping-motor is defective (or its driving IC on the main PCB). The Frost - movement is not located in the default position after the reset.
